Packaging Equipment

Packaging Equipments have been designed in vertical and horizontal shapes. These are strong, tensile in strength and durable in quality. The hand operating equipments are light in weight and resistant to excessive heat, water and other climatic conditions. Available in different style and dimensions and equipped with vacuum heating system for sealing the various kinds of plastic material viz. HDPE, LDPE, PP and polythene. Packaging Equipments are made from stainless steel & mild steel material and coated with heat resistant material. These are semi as well as fully automatic in function with hassle-free operation. The offered machines are commonly used at food processing, shopping malls, chemical and automobile industry. They are available in different types that include shoulder, tagger and hand sealing machines.

Shoulder Sealing Machine
